

# TRIANGLE FASTENER

Triangle Fastener Corporation, formed in 1977, has become a leading supplier of standard and specialty fasteners, tools and accessories for the commercial construction industry.

Triangle specializes in supplying hard-to-find fasteners and accessories used in a wide range of applications. A complete line of fasteners for metal-to-metal, metal-to-wood, commercial drywall and concrete anchoring is available from each of the company's 24 locations.

The Concealor, a proprietary low profile head fastener, was designed for attaching metal panel clips to steel or wood decks.

VRT Technology is a patent pending screw thread designed to significantly increase back-out torque and reduce the potential for failed joints. VRT (vibration resistant thread) has an innovative shape that keeps the fastener tighter in applications where expansion, contraction and vibration are a concern. Independent tests verify that VRT produces more than 3-1/2 times more back-out resistance than a standard thread due to a design that increases friction as the screw loosens.

To support the need for painted fasteners, Triangle has eight in-house painting facilities that custom color match to a customer's exact requirements with delivery of three days or less.

Triangle offers jobsite assistance, technical assistance, Pak-One inventory management programs and product

A Fastening Systems Guide full of products and technical information on a wide variety of fastening system solutions is available.
