

Elk River Lanyard

Lanyards serve as the connection between the harness and the anchorage. When using a lanyard, the anchorage should be at least shoulder height. If no compatible anchorage is available, an anchorage connector, such as an EZE-MAN tie-off Sling or D-ring Anchorage Connector, may be used to create a suitable anchorage. It is the wearer's responsibility to make sure that only compatible connectors are used throughout the entire Fall Arrest (PA) system.

Our lanyards are made of either a web material, rope, or metal cable. All lanyards come with connecting hardware on the ends. The lanyard materials are described in more detail on the next page.

Elk River offers lanyards in two main categories:
Shock absorbing and Non-shock absorbing types.
